

COVID-19 / VIRUS – ANNOUNCEMENT

ROBUST CLEANING PROTOCOL

Today, All Med has taken another step forward to address and ensure patient safety at all of our sites. All Med has partnered with a solution based company which has a patented e-water that is a nontoxic solution that has the power to redefine our idea of a clean environment. The chemicals that our society has come to rely on are harmful to our health, our wallet and our planet. They are also ineffective at killing the bacteria, viruses and superbugs that are plaguing our homes and businesses. Their solution will kill the COVID-19 virus on contact and all of our clinics will have this available and will be cleaned routinely with the solution.

The solution is not only more powerful than chemicals, but their patent-protected systems have revolutionized the very process of generating natural cleaning solutions. The result is a substance that originates in nature and yet is the only of its kind that has no detectable salt in the final product. This means that finally we can use the solutions without risk of corrosion caused by salt-based products. In this time we are taking every possible measure to ensure patient safety.

Every patient that walks through the door will have their hands sprayed with the Hypochlorous Acid; moreover, each exam room has a spray bottle and will again spray the patient and the physicians hands before starting the exam. In addition, the staff will every 30 minutes do an entire walk-thru of the facility to spray each door and door handle as well as the seating area.

What is it?

Electrolyzed Water is the result of a process called electrolysis: salt is electrically separated into its two main ions, sodium and chloride. Those two ions are then mixed into separate streams into its two main ions, sodium and chloride. Those two ions are then mixed into separated, producing – Hypochlorous Acid.

Is it Really Safe? The solution is nontoxic. This means there are no harmful effects if casual contact occurs.
